

Susan Cole, P.ENG, MBA

President – Enhance Energy Inc.

Susan Cole, P.ENG, MBA, has an impressive career spanning over two decades in the oil and gas industry. Susan is the President of Enhance Energy, Inc. a private, Alberta-based company that specializes in enhanced oil recovery involving the permanent sequestration of CO₂. Prior to Enhance, Susan's career path led her to senior management roles on some of Canada's leading oil and gas projects.

A significant career milestone was her selection as the Saskatchewan Oilman of the Year in 2001. This accolade was bestowed on Susan during her time as Manager, Weyburn CO₂ Development. Susan spent five years working on the Weyburn project, where she was responsible for management of the Weyburn Unit and surrounding properties. The Weyburn CO₂ Miscible Flood project, Canada's largest flood, with a capital investment profile of \$1.1B – was the largest single capital investment ever undertaken by PanCanadian.

After her time in Weyburn, Susan managed the Great Plains Engineering Operation; the fastest growing Business Unit at PanCanadian, prior to its merger with AEC creating what is now EnCana.

In 2002, Susan moved into the role of Manager, Athabasca Oil Business Unit at EnCana, where she managed all of the engineering, operations and development in the Oil Business Unit, which focused on waterflooding and polymer flooding of the Pelican Lake heavy oil pool.

After securing key career milestones, the time was right for Susan to start her own company. In 2005, Susan accepted the opportunity to create Enhance Energy. Enhance is quickly growing through acquisitions and joint ventures and is set to create a system that will be the catalyst for both significant greenhouse gas reductions and the development of large scale enhanced oil recovery in the province of Alberta.
